

Install Software with Homebrew in Ansible

Red Hat Ansible

Pretty cool! I started automating my [macOS](#) setup and discovered that mighty **Ansible** ecosystem has even **Homebrew** automation!

Example of Homebrew Cask in Ansible

Here's how I can install [Brave browser](#) using `homebrew_cask` module:

```
- name: Install Brave for macOS
  become_user: greys
  homebrew_cask:
    name: brave-browser
    state: latest
  tags:
    - brave
```

```
when:  
  ansible_os_family == "Darwin"
```
