

# Install ZSH with Homebrew

```
greys@maverick:/ $ zsh --version
zsh 5.7.1 (x86_64-apple-darwin18.2.0)
greys@maverick:/ $ which zsh
/usr/local/bin/zsh
You have mail in /var/mail/greys
greys@maverick:/ $ ls -ald /usr/local/bin/zsh
lrwxr-xr-x  1 greys  admin  27 11 Jun 15:41 /usr/local/bin/zsh -> ../Cellar/zsh/5.7.1/bin/zsh
```

Just a short note confirming how easy it actually is to get started with zsh using [Homebrew](#).

## Installing zsh with Homebrew

```
greys@maverick:/ $ brew install zsh
Updating Homebrew...
==> Auto-updated Homebrew!
Updated Homebrew from c95cf90e3 to db58b9f41.
Updated 3 taps (homebrew/core, homebrew/cask and wpengine/wpe-
cli).

```

```
==> Pouring zsh-5.7.1.mojave.bottle.tar.gz
[] /usr/local/Cellar/zsh/5.7.1: 1,515 files, 13.3MB
```

Now let's check the version:

```
greys@maverick:/ $ zsh --version
zsh 5.7.1 (x86_64-apple-darwin18.2.0)
greys@maverick:/ $ which zsh
/usr/local/bin/zsh
greys@maverick:/ $ ls -ald /usr/local/bin/zsh
lrwxr-xr-x 1 greys admin 27 11 Jun 15:41 /usr/local/bin/zsh ->
../Cellar/zsh/5.7.1/bin/zsh
```

Next step will be to **install Oh My ZSH!**
