

Homebrew

Homebrew for MacOS

Homebrew is a software package manager for [MacOS](#).

It allows installing many of the common open-source packages on your MacOS without making you download source code and compile it yourself.

Most of the modern package management requirements like dependencies and automated conflicts indication are build-in.

Current version: **Homebrew 2.0.0-16-g81b6623**

Homebrew On my MacBook

```
greys@maverick:~ $ brew --version
Homebrew 2.0.0-16-g81b6623
Homebrew/homebrew-core (git revision bf83f; last commit
2019-02-04)
Homebrew/homebrew-cask (git revision 3f44d; last commit
2019-02-04)
```
